PREAMBLE

Stem cell biology has gained a great deal of importance and currently has become one of the exciting fields of biomedical sciences. Since the uncovering of stem cell technology, the implications of this technology in the direction of regenerative medicine have been rapidly expanding. Owing to their unique regeneration potential, the stem cell technology offers a new dimension in the treatment of various critical diseases such as diabetes, coronary diseases, neuronal disorders, cancers, leukemia, bone regeneration etc. Stem cell research continues to progress and gain new insights on identifying how the replacement of the damaged cells by the healthy cells occurs. This area of research has become a fascinating branch in the contemporary fields of biology. Regenerative medicine, in the recent years has resulted in revolutionizing the field of medical treatment. Translational research in different types of stem cell biology has made in roads to bring the various tissue regeneration models into clinical reality. The objective of this webinar is to focus on the cutting edge technology in stem cell research in different fields of biosciences and understand the future prospects.
